IN THE CLAIMS:

Cancel Claims 2, 19, 20, 22, 26 and 27 without prejudice, amend Claims 1, 3, 5, 7, 21 and 23 as follows and add Claims 28-33:

1. (Currently Amended) The combination ~~of an adaptor for a braking deceleration device (1) comprising a plunger (12) which can be pushed into a housing against a braking force for doors or movable furniture parts and attachment plate for the adaptor,~~

~~said adaptor comprising an adaptor body (10), in turn, having a recess structured and arranged to encompass the housing of the braking deceleration device (1) and allow the plunger (12) to extend therefrom or retract thereinto, and~~

~~a smooth external surface structured and arranged to be fixed to the attachment plate and via the attachment plate to a furniture frame or carcass (5), and according to claim 24, wherein~~

the attachment plate comprising comprises a clip installation plate (14) with first projections (22) for accommodating corresponding first recesses (26,50) in the adaptor body (10), lateral end stops (48) and an end hook (24) for engaging second projections (28) in the adaptor body (10).

Claim 2. Canceled

3. (Currently Amended) The combination according to claim 2 24, wherein the viscosity of the additionally comprising damping liquid is having viscosity of at least

15,000cSt.

Claim 4. Canceled

5. (Currently Amended) The combination according to claim 1, wherein the adaptor body (10) additionally comprises second recesses (26, 50) for engagement of the corresponding first projections (22) of the clip installation plate (14) ~~and projections (28) for engaging the hook (24).~~

Claim 6. Canceled.

7. (Currently Amended) The combination according to claim 2 3, wherein the viscosity of the damping liquid is at least 20,000 cSt.

Claims 8-15. Canceled.

16. (Previously Presented) The combination according to claim 1, wherein the clip installation plate (14) comprises a base plate (32) and an intermediate plate (34) which is longitudinally slidable on said base plate (32).

17. (Previously Presented) The combination according to claim 5, wherein the clip installation plate (14) comprises a base plate (32) and an intermediate plate (34) which is longitudinally slidable on said base plate (32).

Claims 18-20. Canceled.

21. (Currently Amended) The combination of claim 24, wherein ~~1~~ being positioned to be longitudinally spaced from a hinge (7) mounted upon both the furniture frame or carcass (5) and a door (9) and along a rotating axis of the hinge (7), such that the plunger (12) is arranged to move in a direction substantially normal to the rotating axis of the hinge (7).

Claim 22. Canceled

23.(Currently Amended) The combination of Claim 25, wherein ~~22-being positioned to be longitudinally spaced from a hinge (7) mounted upon both a furniture frame or carcass (5) and the door (9) and along a rotating axis of the hinge (7),~~ such that the plunger (12) is arranged to move in a direction substantially normal to the rotating axis of the hinge (7).

24.(Previously Presented) A combination for braking deceleration of a door or flap (9) pivotally mounted upon a furniture frame or carcass (5), said combination comprising,

a braking deceleration device (1),

an adaptor for the braking deceleration device (1), and

an attachment plate (14), wherein

said braking deceleration device (1) comprises a plunger (12) structured and arranged to be pushed into a housing against a braking force,

said adaptor comprises an adaptor body (10), in turn, having

a recess structured and arranged to encompass the housing of the braking deceleration device (1) and allow the plunger (12) to extend therefrom or retract thereinto, and

a smooth external surface structured and arranged to be fixed to the attachment plate (14) and via the attachment plate (14) to the furniture frame or carcass (5),

said adaptor is mounted separate and apart from a hinge (7) pivotally interconnecting the furniture frame or carcass (5) and door or flap (9), with said adaptor spaced from the hinge (7) in a direction along a rotating axis of the hinge (7), and

said combination arranged such that the plunger (12) is pressed into the housing

of said braking deceleration device (1) upon closing of the door or flap (9) against the furniture frame or carcass (5).

25.(Previously Presented) A combination for braking deceleration of a door or flap (9) pivotally mounted upon a furniture frame or carcass (5), said combination comprising,

a braking deceleration device (1),

an adaptor for the braking deceleration device (1), and

an attachment plate (14), wherein

said braking deceleration device (1) comprising a plunger (12) structured and arranged to be pushed into a housing against a braking force,

said adaptor comprises an adaptor body (10), in turn, having

a recess structured and arranged to encompass the housing of the braking deceleration device (1) and allow the plunger (12) to extend therefrom or retract thereinto, and

a smooth external surface structured and arranged to be fixed to the attachment plate (14) and via the attachment plate (14) to the door or flap (9),

said adaptor is mounted separate and apart from a hinge (7) pivotally interconnecting the furniture frame or carcass (5) and door or flap (9), with said adaptor spaced from the hinge (7) in a direction along a rotating axis of the hinge (7), and

said combination arranged such that the plunger (12) is pressed into the housing of said braking deceleration device (1) upon closing of the door or flap (9) against the furniture frame or carcass (5).

Claims 26 and 27. Canceled

28. (New)The combination according to claim 25, wherein

the attachment plate comprises a clip installation plate (14) with first projections (22) for accommodating corresponding first recesses (26,50) in the adaptor body (10), lateral end stops (48) and an end hook (24) for engaging second projections (28) in the adaptor body (10).

29. (New) The combination according to claim 25, additionally comprising damping liquid having viscosity of at least 15,000cSt.

30. (New) The combination according to claim 28, wherein the adaptor body (10) additionally comprises second recesses (26, 50) for engagement of the corresponding first projections (22) of the clip installation plate (14).

31. (New) The combination according to claim 29, wherein the viscosity of the damping liquid is at least 20,000 cSt.

32. (New) The combination according to claim 28, wherein the clip installation plate (14) comprises a base plate (32) and an intermediate plate (34) which is longitudinally slidable on said base plate (32).

33. (New) The combination according to claim 30, wherein the clip installation plate (14) comprises a base plate (32) and an intermediate plate (34) which is longitudinally slidable on said base plate (32).
